TRAKAID^{TM} INTRODUCES COMPREHENSIVE LOGISTICS SOLUTION

~Helps Provide Timely and Accurate Delivery of Gas in Test-certified Cylinders ~

SHELTON, CT, NOVEMBER 3, 2014 – A comprehensive cylinder Logistics Solution has been engineered as an add-on to any cylinder management solution. Companies may implement the Solution on intelligent Auto Data Capture (ADC) devices, on a laptop or on a robust tablet with internet access. ADC technology is integral to automate date entry, as it eliminates errors encountered during manual data entry. Trakaid's new Logistics Solution will be introduced at *gasworld*'s Industrial Gas Conference in Singapore.

"The new automated Logistics Solution gives companies the tools, via intelligent data at point of use, to be able to better provide reliable, safer and faster cylinder delivery, and achieve a higher level of customer satisfaction," said Girish Gupta, President, Technology Solution Partners, LLC, adding, "Better accuracy and safety translates to higher profits."

The Logistics Solution works as an add-on with cylinder management solution and works seamlessly with Trakaid's CyTrack Cylinder Management Solution. CyTrack is a web-based tracking system which gives companies the ability to view a current status of critical assets and assess their impact on business processes from any location.

Using this Solution allows a logistics team to validate each customer's designated cylinder before delivery, and offload that cylinder from the delivery vehicle. When retrieving cylinders from a customer, the logistics team can mark a cylinder as physically damaged, view cylinders that are due for testing and check to see if a cylinder has been recalled. The Logistics Solution ensures these cylinders are returned to a central location for servicing before they are put back

into operation. Further, the Logistics Solution provides the ability to transfer instantly actionable data to a central office.

Through the introduction of the Logistics Solution, Trakaid continues to design products that give its customers the best cylinder tracking Solution available. This helps customers raise their return on investment and thrive in the current business environment. With the add-on Logistics Solution, CyTrack's benefits encompass all aspects of the cylinder business including receipt, production, testing, service, invoicing, delivery, ADC and logistics.

About Us

Headquartered in Shelton, Connecticut, Technology Solution Partners LLC (TSP) is an information technology (IT) consulting and services company providing comprehensive and cost-effective onshore and offshore software development, management and monitoring services. For 27 years, TSP has designed, developed, integrated and implemented end-to-end solutions for leading businesses.

TSP eases the challenge of escalating costs and helps businesses keep pace with emerging technologies and standards which create significant challenges for software and IT departments. TSP employees are highly-skilled professionals who deliver alternative, cost-effective approaches to help companies attain competitive, technology-based business solutions.

With its experience integrating innovation and technology, TSP's comprehensive and collaborative approach covers all aspects of the solution, offering customizable business models, a lean philosophy and the innovative "IMPACT" Delivery Model. TSP delivers unique and timely solutions that are simple to use and manage and meet evolving business challenges, while offering cost reductions.
